Software Solutions

Introduction

JMR Consulting UK Ltd partners with selected software providers to deliver innovative solutions to our clients. We offer a range of software solutions including a general insurance software suite (from IDIT) as well as the development and support of bespoke software application.

JMR supports the migration of legacy applications (both data and platforms). We only partner with software companies that have a demonstrable track record for implementation. We can engage with clients on a time and materials or a fixed time, fixed price basis for the implementation of its solutions. Our teams have consistently delivered solutions across multiple technologies and platforms, working both locally and globally.

Standing out from the crowd; making a difference

JMR Solutions

Our teams have consistently delivered solutions across multiple technologies and platforms working both locally and globally. We work closely with our clients to align our proven project management and delivery methodologies with the clients' preferred approach to ensure project success.

Sales and Implementation of IDIT software suite

For the sales and implementation of the IDIT software suite, JMR provide sales, insurance domain expertise and pre sales resource. Once a sale moves into implementation, JMR will take responsibility for the project management, interface development and testing whilst IDIT will focus on developing the functional gaps and product configuration.

Development of bespoke application software

JMR will take responsibility for scoping, application development, testing and post implementation support.

Migration of software applications, data and platforms

JMR will take responsibility for scoping, application development, testing and post implementation support.

Independent testing and verification of software

Our team will help you decide on the appropriate testing strategy and then work with you to plan, document and execute the testing .

JMR Approach

Pre-analysis: Analysing existing systems first, then integrate new application architectures, enhancing your ability to manage mission-critical applications. A full understanding of the business requirements and needs will reduce application development efforts and improve the delivery time.

Analysis: Our composite application analysis looks at all business functions. Our initial focus is on a system-level understanding, identifying business methods before making informed technical decisions.

Design customisation: JMR's comprehensive solutions ensure that operating systems, applications, databases, middleware, and servers operate seamlessly.

Implement: JMR ensures an end-to-end solution is implemented, with minimal risk and maximum integrity. We support our clients in all aspects of system integration and implementation.

Maintain: At JMR, a maintenance strategy incorporates feedback mechanisms for continuous improvement and enhancement.

Project management: We mitigate risk by assigning a dedicated and experienced project manager. Project plans are prepared, reviewed and projects are continuously monitored and aligned with strategic outcomes. Volatile business rules are identified and isolated, ensuring our solutions are flexible in design. The result? A solution delivered on time within budget.

Why JMR?

JMR has over twenty years experience of delivering complex enterprise wide IT solutions to meet business needs.

Our track record of delivering solutions to time and budget are exceptional and supported by excellent client references. Our approach is to form long term strategic relationships with our clients.

JMR has access to an international resource pool experienced in working with different cultures. This allows JMR to provide flexible delivery models including on-shore, near-shore and off-shore. With our focus on people, process and technology we are a partner you can trust to deliver.
